- Automation
- Private cloud / on-premise deployment options
- Microsoft 365, PSA, RMM, and Active Directory integrations
- Unlimited recoverability, robust storage capabilities and secure long-term retention
- AirGap™ Technology

WHY IMPLEMENT BUSINESS-GRADE FILE SYNC?

As remote work adoption skyrockets, SMBs are adopting consumer-grade, unmanaged file sync services in droves. These services jeopardize corporate data and place companies at risk of data theft, data loss, data sprawl, and lawsuits.

WHY SECURE SYNC AND SHARE?

Secure Sync and Share is a secure content collaboration tool exclusively built for SMBs that focuses on data protection and maximizing productivity. Unlike Microsoft OneDrive and SharePoint, our product guarantees total control and instant recoverability.

HOW DOES SECURE SYNC AND SHARE WORK?

Secure Sync and Share offers SMBs invincible productivity by protecting file servers and cloud, enabling them to enhance value and ease of use. Benefit from secure access, sharing, and collaboration, and peace of mind knowing that data is protected and secure.
